

Terrainian Space Globes are a small studio workshop based a few miles outside the city of Kingston upon Hull in the county of East Yorkshire, England.

We specialise in the production of high quality moon and planetary globes. These globes show surface features in three dimensions and are created using NASA Digital Elevation Model data.

Each globe is handmade, individually numbered, and includes a solid aluminium base with etched brass identity plate. Customisation is also possible by adding etched brass plate/s to the stand.

Terrainian Space globes have been sold all around the world, some to quite prestigious customers...

**HARRISON SCHMITT**  
Presentation of a customised 30cm Moon Globe to Harrison Schmitt, Apollo 17 Lunar Module pilot, by Dr. Jeffrey Isaacson, President and CEO

of the USRA, and NASA Administrator, Robert Lightfoot.

Harrison Schmitt is an American geologist, retired NASA astronaut, university professor, former U.S. senator from New Mexico, and the most recent living person to have walked on the Moon.

**LUNAR AND PLANETARY INSTITUTE – HOUSTON**

A research institute providing support services to NASA and the planetary science community

A 30cm Moon globe is currently on display in the Lunar and Planetary Institute Library.- Houston, and another globe is at the NASA Solar System Exploration Research Institute, Ames Research Center - California.

**SPACEFORCE - NETFLIX**

Look carefully and you can see one of our Moon globes on the set of the new Netflix series “SpaceForce” with Steve Carell

We also have many other customers around the world who have expressed their appreciation of our efforts. We try to produce globes that are both beautiful and informative, to combine engineering, art, craft and science. As we continue to develop our globes, we hope you will continue to enjoy them.
